Customer Reviews

For those who have the need to determine erosion factors and soil loss this is an excellent book. I have used it to check the results of computer modeling programs for terrace and water impound structures; the programs will only see what is placed in. Using the formulas longhand the flaws in the imputes can be found. I like the book very well.

This is exactly what I expected and actually in better condition than I thought. Great book for those in Soil Conservation!
